

VENOMOUS

Common Night Adder (*Causus rhombeatus*)

Maximum Length:
1 m

Other names:

Rhombic Night Adder, Gewone Nagadder

Despite the common name, the Night Adder is more active during the day. It averages 30 – 60 cm in length, but can reach 1 m. It can be identified by the distinct dark V-marking on the head. It prefers damp localities and is a frog specialist. The Night Adder is generally a docile snake but will hiss aggressively and strike when provoked. It accounts for many bites, especially in KZN and the Eastern Cape. It is commonly found in suburban gardens.

Night Adder venom is cytotoxic, and most bites are not serious – causing pain and swelling. Having said that, the venom of this snake should never be underestimated, especially in children, as some victims require hospitalisation.
