## TO OUR CUSTOMERS,

The African Snakebite Institute has gone to great lengths to secure quality products for our market. We already have the largest range of snake tongs and snake hooks available in Africa and our JM snake tongs are of the highest quality and each product is guaranteed.

Snake tongs and snake hooks are vigorously tested during our snake handling training sessions and we receive very positive feedback from our corporate clients that make use of ASI products.

Wherever we struggle to find suitable products for our clients, we develop our own and both our lightweight snake gaiters and standard snake gaiters have become best-sellers to corporates, hunters, hikers, fly fishermen and even competitive mountain bikers. We have also developed gaiters for children.

Our range is always expanding and now includes clothing, branded coffee mugs, sterling silver jewellery, books and posters. We are also the largest supplier of scorpion torches in Africa and regularly update this range with the latest technology.

Please check out our product list and if there are related products that you need and that are not listed, do notify us and let's see if we can assist.

# SNAKE TRAPS

## ASIT 1.0 Electronic Snake Trap

Introducing the new ASIT 1.0 Electronic Snake Trap. A collaborative project between Lumin8 and the African Snakebite Institute, and a first in the world for electronic snake traps.

Tried and tested, these electronic snake traps are extremely useful for snake removal, especially on mines, hostels, barracks, and warehouses.

The trap is made of plastic tubing, and has a computerised circuit board with various sensors and mechanical parts. It is baited on the inside with a chicken egg or frozen mouse, and the idea is that the snake will smell the bait and enter the tube. The entrance to the trap has a mechanised trap door. It is battery powered and lasts for more than a month on a set of alkaline batteries. The trap also makes provision for optional extras such as a GSM Modem for cellular communication, and an external solar panel or power source. When switched on, the trap is immediately reset, shows the battery status, resets the trapdoor to its zero position and goes into sensor mode.

As the snake enters the trap, its presence is detected by the various sensors, and once in the trap, the trap door closes behind it.

If the trapdoor touches any part of the snake's tail or body, it will immediately reopen and close again, ensuring that the snake is not harmed.

The trap will then remain closed until the snake is retrieved by a qualified snake handler on site.

## ASI Hunters Gaiters Lite

ASI Hunters Snake Gaiters – proudly made in South Africa, are flexible snake gaiters that weigh 240 grams each. The outer shell is made of Authentic 500D Cordura® with a double acrylic coating, which is water-resistant and calendered for softer handling, while the inner shell is made of two layers of DuPont™ – Kevlar® micro filament yarn. It is very finely woven material that renders exceptional protection against fragmentation, with an anti-stab capability.

These two layers are stitched into an inner casing of high tenacity nylon (parachute material). The gaiters are one size fits all with a YKK® zip at the back. Each gaiter is adjustable at the back and has a loop for a shoelace to fit through on the underside. The Hunters Snake Gaiters have been tested against bites from the Puff Adder, Cape Cobra, Snouted Cobra and Black Mamba with no penetration during testing.
